Introduction	3
List of potential PD and QA early adopters in the five initial countries	3

Introduction

The adoption of ICP by Project Developers and Quality Assurance Providers will be the main measure of success factor for this project. This is why they were the first audience to be targeted in our communications as soon as the project started in May 2017, and they represented the majority of attendees to the introductory webinar on I3CP delivered on June 27, 2017. Since then, contacts with these potential early adopters have been initiated and nurtured through the development of the Technical Forum, the expansion of the Steering Groups and the multiple outreach efforts of the Consortium. The following list includes the names of organizations that have expressed interest in I3CP, or that In-Country Advocates are targeting as potential adopters, and thus where staff can be trained on I3CP Protocols. Specific names have been provided where possible. There is a total 121 potential Project Developer and Quality Assurance Provider early adopters.
